Adithya M.

Bangalore, India • adithya.m290701@gmail.com

Backend engineer with experience on fast-paced teams at B2B and enterprise AI companies. Grounded in engineering fundamentals and systems thinking, with a customer-first approach to making complex workflows reliable, simple, and satisfying to use.

EDUCATION

BITS Pilani, Goa Campus | B.E. Computer Science, Minor in Data Science — Jul 2019 – Jun 2023
CGPA: 8.89/10
Relevant coursework: Algorithms, Databases, Operating Systems, Computer Networks, Compiler Construction
Data Science: Machine Learning, Deep Learning, Artificial Intelligence

SKILLS

Programming: Go, Rust, TypeScript, Python, C++
Technologies: Docker, Kubernetes, Redis, MongoDB, Fastly, gRPC, Linux
Concepts: Distributed Systems, Microservices, CI/CD, DevOps

EXPERIENCE

Member of Technical Staff, DevRev — Bangalore, India — Jul 2023 – Present

- Built Incident Management data models and paging from the ground up. In a four-person team, helped develop an AI on-call agent to triage Datadog alerts, suggest owners using GitHub history, and propose fixes; average detection time fell from 7–8 hours to about 5 minutes.
- Led integration of hierarchical team workspaces, membership and access controls, and team-scoped issues and sprints across navigation, widgets, resource types, migrations, and DevRev Computer.
- Built a customer-segmentation framework used by 50+ customers; improved Fastly custom-domain setup, reducing manual effort by 80% across 30+ setups.
- Organized four or more internal hackathons and team-building events.

Software Engineer Intern, Harness.io — Remote — Jan 2023 – Jun 2023

- Primary backend contributor to Software Supply Chain Assurance, developing repository, artifact, and CI/CD security capabilities; integrated 10+ tools, including Snyk and Cosign.
- Implemented open-source governance with SBOM workflows and SLSA attestations, including support for two commonly used SBOM formats.

Member of Technical Staff Intern, DevRev — Bangalore, India — May 2022 – Jul 2022

- Helped create a JSON-driven onboarding flow, including its Kafka consumer, so non-technical teammates could tailor customer onboarding and save hours of engineering time.

PROJECTS & RESEARCH

Seal Detection System — Three-person project for a professor — Deployed at NSE

- Implemented the system with two teammates for a professor outside BITS Pilani; deployed at the National Stock Exchange.

Publication: Co-author, "MalEfficient10%: A Novel Feature Reduction Approach for Android Malware Detection," BroadNets 2023. doi.org/10.1007/978-3-031-40467-2_5

LEADERSHIP & TEACHING

Coordinator, Developers' Society of BITS Goa — May 2021 – Apr 2022

- Led 100+ student developers across Web, Mobile, AR/VR, ML, and Blockchain; helped run a 2,000+ participant technical festival and secure INR 2,000,000 in sponsorship.

Instructor and Mentor, Center for Technical Education, BITS Goa — Jul 2020 – Dec 2020

- Delivered 30+ hours of Android development tutorials, mentored students, and reviewed assignments.
